## Preamble

WHEREAS, Scientific research and medical innovation are essential to protecting public health and advancing knowledge; and

WHEREAS, The State has a compelling interest in ensuring that scientific research and medical innovation are conducted in a manner that is ethical, responsible, and consistent with evolving scientific standards; and

WHEREAS, Advances in technology and methodology have increasingly made reducing, refining, or replacing the use of live animals in laboratory testing a possibility; and

WHEREAS, The unnecessary or excessive use of animals in research undermines public confidence and fails to reflect best practices in modern science; and

WHEREAS, It is the policy of the State to require that animal testing be employed only when scientifically justified and when no reasonably available alternative methods exist; and

WHEREAS, When animal testing is necessary, it should be conducted using the minimum number of animals required and adhere to standards that prioritize humane treatment and oversight; and

WHEREAS, Establishing clear statutory standards for the necessity, minimization, and review of animal laboratory testing will promote scientific integrity, ethical responsibility, and public trust; now, therefore,
